*MDPI This book covers a range of topics including selective technologies and algorithms that can potentially contribute to developing an intelligent environment and smarter cities. While the connectivity and efficiency of smart cities is important, the analysis of the impact of construction development and large projects in the city is crucial to decision and policy makers, before the project is approved. This book also presents an agenda for future investigations to address the need for advanced tools such as mobile scanners, Geospatial Artificial Intelligence, Unmanned Aerial Vehicles, Geospatial Augmented Reality apps, Light Detection, and Ranging in smart cities. Some of selected specific tools presented in this book are as a simulator for improving the smart parking practices by modelling drivers with activity plans, a bike optimization algorithm to increase the efficiency of bike stations, an agent-based model simulation of human mobility with the use of mobile phone datasets. In addition, this book describes the use of numerical methods to match the network demand and supply of bicycles, investigate the distribution of railways using different indicators, presents a novel algorithm of direction-aware continuous moving K-nearest neighbor queries in road networks, and presents an efficient staged evacuation planning algorithm for multi-exit buildings.*

## The BIM Manager's Handbook, Part 5

### Day-to-Day BIM Management

*John Wiley & Sons ePart 5: Day-to-Day BIM Management: How do you go about mastering hands-on support BIM for your team? ePart 5 introduces the operational tasks a BIM Manager is expected to accomplish. Depending on an organisation's size BIM Managers either supervise the rollout of BIM on various projects, or they actively get involved in mentoring those authoring or coordinating information in BIM. By providing a strong project focus, this ePart, firstly, addresses requirements for in-house BIM project support; secondly, it explains how to support the integration and coordination of BIM data across a multi-disciplinary project team. Leading BIM experts from the US, UK and Australia divulge their recipes for successful operational management. ## A Guide to Enabling BIM on Building Projects

## The Design Manager's Handbook

*John Wiley & Sons Design management as a recognised role in the built environment industry is relatively new, initially arising from the need for better co-ordination and delivery of design information from design teams to main contractors - particularly important as procurement routes involving contractor led design have become much more commonplace. The advent of design packages driven by specialist sub-contractors has also increased the need for co-ordination and management of the design process. With the growing complexity of construction projects, effective design management is increasingly central to project success. BIM, as it gains acceptance across the industry will undoubtedly have a huge impact on project delivery process and the role of the Design Manager. The CIOB Design Manager's Handbook covers subjects such as design process and management tools, the role of the Design Manager, value management and innovation, procurement routes and implications, people dynamics, and factors that will affect the development of the Design Manager's role in the future, including BIM. It will ensure Design Managers understand the processes, tools and skills that are required to be successful in the role, and will assist them in delivering real value to complex construction projects. Written for both the Design Manager practitioner and students on construction related degree courses, anyone interested in construction based design management will also find the book useful.*

## BIM for Heritage

### Developing a Historic Building Information Model

*This guidance on Building Information Modelling for heritage (Historic BIM) offers guidance for owners, end-users and professionals in the fields of heritage and construction. By raising awareness of the potential advantages of a BIM approach, this guidance will help users successfully implement BIM in heritage projects. Historic BIM is, by definition, a multi-disciplinary process that requires the input and collaboration of professionals with very different skillsets. It is also a fast-developing field in terms of research, official guidance, standards and professional practice. This publication addresses the issues surrounding the production and use of BIM for history buildings, and provides information about guidance and standards available elsewhere for managing a building's entire life cycle effectively.*

### The BIM Manager's Handbook, Part 3

#### Focus on Technology

*John Wiley & Sons ePart 3: Focus on Technology: How do you ensure your organisation gets the most out of the BIM technology available? Dedicated to the main technology-related aspects of a BIM Manager's role, this ePart explains how to establish and manage an organisation's BIM-related tool-ecology and how to use BIM in order to link from design to fabrication. What do BIM Managers need to do in order ensure their teams use the right tools for the various tasks in design, construction and beyond? How do they connect them and how do they keep up with updates in this rapidly changing environment. This ePart highlights the challenges BIM Managers need to overcome in software, hardware and network selection. It also brings into focus the opportunities BIM Managers face in the changing context of BIM in the Cloud. Extending beyond technical know-how, it also offers advice on how to create a successful interface between the BIM Manager and the IT specialist(s). ## Building Product Models

### Computer Environments, Supporting Design and Construction

*CRC Press Building Product Models thoroughly presents the concepts, technology, and methods now used to work out what will become the building product model - a new, digital representation for architecture, civil engineering, and building construction. Organized into three sections (history, current tools and concepts, and existing efforts and research issues), this resource provides the field of building product modeling with a standard reference as well as a single, comprehensive text for university courses. Until now, all the efforts in building modeling have been reported in research journals and conference proceedings or been made available as draft standards on the Internet. Building Product Models is the only book available on this vital field, bringing together essential aspects of major efforts from the early 1970s to the present.*
