NOTES ON STEREOTOMY

PREPARED FOR THE USE OF STUDENTS IN CIVIL ENGINEERING, IN THE MASSACHUSETTS INSTITUTE OF TECHNOLOGY (CLASSIC REPRINT)

Forgotten Books Excerpt from **Notes on Stereotomy: Prepared for the Use of Students in Civil Engineering, in the Massachusetts Institute of Technology** General drawings should commonly be made, if practicable, to as large a scale as one-half or three-quarters of an inch to the foot; detail drawings to as large a scale as is necessary for clearness, and frequently they must be of full size. About the Publisher **Forgotten Books** publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. **Forgotten Books** uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

THE EVOLUTION AND EVALUATION OF AN INTERACTIVE ENGINEERING DESIGN TEACHING TOOL

MIT'S EDICS

For this thesis, I refined and tested a computer-based engineering teaching tool called EDICS. EDICS (Engineering Design Instructional Computer Program) has proven to be a fun and intriguing means of conveying a wide variety of engineering design subjects to undergraduate students. The core audience of EDICS was assumed to be undergraduate engineering students who lacked the practical experience of manipulating common mechanical components and devices. It has been discovered, though, that EDICS is a useful tool for nearly all types of engineering students at many different levels of experience. The testing of EDICS was carried out by having students study either short excerpts from the program or similar subjects covered either in a popular textbook or a booklet, then testing their knowledge retention by subjecting them to a short, written exam. The subjects that were studied were: transmissions, fastening and joining techniques, and engineering drawing and drafting. The results of this evaluation show that in the subjects of transmissions and fastening and joining, students who used EDICS to study performed significantly better than those who studied using paper-based materials. In the subject of engineering drawing and drafting, the students using EDICS scored, on average, better than the students using the paper-based materials, but the difference was found to be not statistically significant.

DESIGN AND ANALYSIS OF INTEGRATED MANUFACTURING SYSTEMS

National Academies Press Design and Analysis of Integrated Manufacturing Systems is a fresh look at manufacturing from a systems point of view. This collection of papers from a symposium sponsored by the National Academy of Engineering explores the need for new technologies, the more effective use of new tools of analysis, and the improved integration of all elements of manufacturing operations, including machines, information, and humans. It is one of the few volumes to include detailed proposals for research that match the

needs of industry.

STRUCTURAL, SYNTACTIC, AND STATISTICAL PATTERN RECOGNITION

JOINT IAPR INTERNATIONAL WORKSHOP, SSPR & SPR 2008, ORLANDO, USA, DECEMBER 4-6, 2008. PROCEEDINGS

Springer This volume in the Springer Lecture Notes in Computer Science (LNCS) series contains 98 papers presented at the S+SSPR 2008 workshops. S+SSPR 2008 was the sixth time that the SPR and SSPR workshops organized by Technical Committees, TC1 and TC2, of the International Association for Pattern Recognition (IAPR) were held as joint workshops. S+SSPR 2008 was held in Orlando, Florida, the family entertainment capital of the world, on the beautiful campus of the University of Central Florida, one of the up and coming metropolitan universities in the USA. S+SSPR 2008 was held during December 4-6, 2008 only a few days before the 19th International Conference on Pattern Recognition (ICPR2008), which was held in Tampa, only two hours away from Orlando, thus giving the opportunity of both conferences to attendees to enjoy the many attractions offered by two neighboring cities in the state of Florida. SPR 2008 and SSPR 2008 received a total of 175 paper submissions from many different countries around the world, thus giving the workshop an international clout, as was the case for past workshops. This volume contains 98 accepted papers: 56 for oral presentations and 42 for poster presentations. In addition to parallel oral sessions for SPR and SSPR, there was also one joint oral session with papers of interest to both the SPR and SSPR communities. A recent trend that has emerged in the pattern recognition and machine learning research communities is the study of graph-based methods that integrate statistical and structural approaches.
