## GAME THEORY

## A JOHN MURRAY ORIGINAL

JM Originals Clare's mind strayed back once again to that weekend in August at Henry's house. Perhaps nothing would have happened if they hadn't played croquet on the Saturday afternoon. Fucking croquet. Alex and Clare have gone to spend the weekend at Henry and Victoria's house in the Kent countryside. Clare and Alex have been a couple for ten years, but little of whatever brought them together is left in their marriage. Henry's a friend from the old days, but it isn't clear how much they still have in common, while Vic doesn't much care for their guests; especially not Alex, who suddenly finds he can't keep his eyes off her. The weekend seems unlikely to end well. The consequences unspool over the years that follow. As their lives disentangle from and re-entwine with each other, they pass through most of the hoops that life stakes out for them, if not always in the right order, or the right direction - a little older, not much wiser, and as unready as ever for the next round. Game Theory is a comedy about friendship, sex and parenting, and about the games people play.

## SIDNEY POITIER

## MAN, ACTOR, ICON

Univ of North Carolina Press In the first full biography of actor Sidney Poitier, Aram Goudsouzian analyzes the life and career of a Hollywood legend, from his childhood in the Bahamas to his 2002 Oscar for lifetime achievement. Poitier is a gifted actor, a great American success story, an intriguing personality, and a political symbol; his life and career illuminate America's racial history. In such films as Lilies of the Field, In the Heat of the Night, and Guess Who's Coming to Dinner, Poitier's middle-class, mannered, virtuous screen persona contradicted prevailing film stereotypes of blacks as half-wits, comic servants, or oversexed threats. His screen image and public support of nonviolent integration assuaged the fears of a broad political center, and by 1968, Poitier was voted America's favorite movie star. Through careful readings of every Poitier film, Goudsouzian shows that Poitier's characters often made sacrifices for the good of whites and rarely displayed sexuality. As the only black leading man during the civil rights era, Poitier chose roles and public positions that negotiated the struggle for dignity. By 1970, times had changed and Poitier was the target of a backlash from film critics and black radicals, as the new heroes of "blaxploitation" movies reversed the Poitier model. In the 1970s, Poitier shifted his considerable talents toward directing, starring in, and producing popular movies that employed many African Americans, both on and off screen. After a long hiatus, he returned to starring roles in the late 1980s. More recently, the film industry has reappraised his career, and Poitier has received numerous honors recognizing his multi-faceted work for black equality in Hollywood. As this biography affirms, Poitier remains one of American popular culture's foremost symbols of the possibilities for and limits of racial equality.

## QUANTITATIVE FUNDAMENTALS OF MOLECULAR AND CELLULAR BIOENGINEERING

MIT Press A comprehensive presentation of essential topics for biological engineers, focusing on the development and application of dynamic models of biomolecular and cellular phenomena. This book describes the fundamental molecular and cellular events responsible for biological function, develops models to study biomolecular and cellular phenomena, and shows, with examples, how models are applied in the design and interpretation of experiments on biological systems. Integrating molecular cell biology with quantitative engineering analysis and design, it is the first textbook to offer a comprehensive presentation of these essential topics for chemical and biological engineering. The book systematically develops the concepts necessary to understand and study complex biological phenomena, moving from the simplest elements at the smallest scale and progressively adding complexity at the cellular organizational level, focusing on experimental testing of mechanistic hypotheses. After introducing the motivations for formulation of mathematical rate process models in biology, the text goes on to cover such topics as noncovalent binding interactions; quantitative descriptions of the transient, steady state, and equilibrium interactions of proteins and their ligands; enzyme kinetics; gene expression and protein trafficking; network dynamics; quantitative descriptions of growth dynamics; coupled transport and reaction; and discrete stochastic processes. The textbook is intended for advanced undergraduate and graduate courses in chemical engineering and bioengineering, and has been developed by the authors for classes they teach at MIT and the University of Minnesota.

Xlibris Corporation A Grizzly on the other hand just seems to have a cantankerous nature that causes him to challenge anything that enters his territory. I had been told that the last Grizzly in these mountains had been killed over fifty years ago. Someone was wrong in this assessment, because these claw marks were fresh. They had to have been made within the last day or two because the cuts in the bark were deep and still bleeding with sap. I stopped and pointed them out to Gale. She turned pale. She took out her camera and said, "Dad is not going to believe this."

### THE QUEST FOR THERAPY IN LOWER ZAIRE

---

[Univ of California Press](#) In this book, Dr. John M. Janzen describes patterns of healing among the BaKongo of Lower Zaire in Africa, who, like many peoples elsewhere, utilize cosmopolitan medicine alongside traditional healing practices. What criteria, he asks, determine the choice of the alternative therapies? And what is their institutional interrelationship? In seeking answers, he analyzes case histories and cultural contexts to explore what social transactions, decisionmaking, illness and therapy classifications, and resource allocations are used in the choice of therapy by the ill, their kinfolk, friends, associates, and specialized practitioners. From the Preface: This book presents an "on the ground" ethnographic account of how medical clients of one region of Lower Zaire diagnose illness, select therapies, and evaluate treatments, a process we call "therapy management." The book is intended to clarify a phenomenon of which central African clients have long been cognizant, namely, that medical systems are used in combination. Our study is aimed primarily at readers interested in the practical issues of medical decision-making in an African country, the cultural content of symptoms, and the dynamics of medical pluralism, that is, the existence in a single society of differently designed and conceived medical systems.
